Optimizing the Super-turbocharged Aeroengine Julian R. Panting

1998-03-06 Turbprop or turbojet engines are the main means of providing motive power for flight. Any improvements which can be made to these technologies in terms of power or fuel efficiency are significant and important developments. After first setting the scene with a short account of aeroengine development, the book goes on to show how a super-turbocharged aeroengine can be significantly more efficient. A detailed account of the studies into the new design philosophy is given and the numerical results of the computational model of this engine design model are analysed. The unusual design of these piston engine units is theoretically modelled and their mechanical design is discussed in some detail. CONTENTS:

Conventional jet engine performance
Centrifugal supercharger Emissions
Performance at altitude Axial piston engine
Gas generator Turbine and high-speed alternator design
Optimisation techniques Numerical

modelling and results Compound turbocharged engine
